

HYDRAULIC PERSONNEL LIFT FOR AEROSPACE INDUSTRY MATERIAL HANDLING

SPECIALTY SOLUTION #2

AEROSPACE/DEFENCE

- Meets stringent demands of aerospace and defence industry
- Tight vertical travel and strict stability constraints
- Open-grate 144" diameter work platform

Handling Specialty was approached to engineer and design a lift that would assist an internationally recognized aerospace and defence company in the US with the interior assembly of a rocket being used to launch satellites into space.

The multi-stage hydraulically-actuated lift had large structural requirements as well as tight vertical travel and stability constraints. The lift had an open-grate 144" diameter work platform and vertical travel of 180".
